

Images of Urbanism

An informal slide presentation presented by CSS Architecture

Urbanism is a subset of Environmentalism. It is the study, making and using of the human habitat with a goal towards harmony with the larger natural habitats that make up the whole of our environment.

Urbanism is not about making big cities; it is about making functional human places. Some may be big cities, some may be small towns.

When we talk about urbanism, smart growth, infill and sprawl, we all have different ideas about what we like and what we don't.

Join us for a look at some snapshots of healthy urban places (and some unhealthy ones). Our goal is to deconstruct the term urban and get a sense of the broad range of possible responses to place making that have been marginalized by sprawl for the last 50 years.

Bring snapshots of your own (on CD) if you'd like to share your thoughts.

Wednesday September 21, 2005
7:00 pm

At the office of CSS Architecture
1103 Juanita Avenue
Burlingame, California.
